

IN THE SPECIFICATION

Please amend Paragraph [0043] on Pages 12-13 as follows:

-- [0043] The device 50 shown in Fig. 10 has been shown to be suitable for cooking pizza's, from frozen or non-frozen, both placed directly on the oven shelf and those which must be cooked on a baking tray. The device 50 is formed from thin, lightweight aluminum having excellent heat conduction properties. Accordingly, heat is effectively transferred by conduction from the upper surface 51 of the device to the underside of the central region of the pizza. A circular aperture 52 is provided at the central region of the pizza. The device can be washed and reused many times. The angle of the upper pizza supporting surface 51 of the device is arranged at a shallower slope than the peripheral region 53 of the device. The peripheral region 53 also includes an outer horizontally extending support rim 54. --

IN THE DRAWINGS

Applicant submits a Replacement Sheet No. 1 containing Figure 10 and reflecting corrections made to Figure 10.
